**BREAKING****UPDATE ON ISLANDER HOSPITALIZED (ALLEGEDLY)  
WITH THE SARS COV-2 VIRUS CAUSING COVID-19**

I was contacted late this afternoon by a person with information directly from a nurse caring for the person hospitalized with - allegedly - the virus causing COVID-19.

Of course there is no evidence the person has the virus, and we know that because Dr. Morrison confirmed in an email to my brother that PEI is using a Cycle Threshold Value of 37.9 and we all now know that PCR tests using a CT above 35, according to Dr. Anthony Fauci with the CDC, are useless:

"What is now sort of evolving into a bit of a standard," Fauci said, is that "if you get a cycle threshold of 35 or more ... the chances of it being replication-confident are minuscule." He continued: "It's very frustrating for the patients as well as for the physicians," he continued, when "somebody comes in, and they repeat their PCR, and it's like [a] 37 cycle threshold, but you almost never can culture virus from a 37 threshold cycle."

So with PEI using 37.9 we shouldn't take the claim that we have a person with the COVID disease too seriously, especially given his compromised health.

So with PEI using 37.9 we shouldn't take the claim that we have a person with the COVID disease too seriously, especially given his compromised health.

I have not - obviously - been able to independently verify the accuracy of the information sent to me. I'm sharing the entire back and forth between this person and me on Facebook messenger nonetheless, because I can think of no motive for someone to have sent this other than that stated in the message: a desire to share truthful information of relevance the person obviously believes is of no interest to the mainstream media, and fears will not be made public otherwise.

The covid case in the hospital is a gay male in his 40, has HIV and is thereby probably auto immune. He is doing well at this time and is on oxygen. They say that the nurses are wearing appropriate protection. They wear hospital coverall, flimsy face-shield and normal mask. Doesn't sound like the N95 they should be wearing. They keep this out of the news obviously. I am not sure what to do with this information but I thought I would send this to you because I don't want to keep this to myself. I know many nurses from the hospital and this came from a nurse that directly cares for him. I am not allowed to tell anyone. But I think adding that he has HIV is pretty important. Or at least that he is a high risk case. This is all the information I have. Thank you for what you do!!!

Wow! Thank you so much. Can I share what you just wrote, without your name of course? People are already overreacting with "one hospitalization" as if it's the beginning of the end of us (ourselves). This information is incredibly important for two reasons: (1) if the person dies, people will at least wonder whether it was from his underlying medical condition rather than the virus, which will reduce the panic, or (2) if the person recovers, people will see that even an immune-compromised person need not fear the virus.

Ofcourse! That is why I am sharing it with you!

And it isn't proved that he is auto immune, but when you have HIV it is very likely that you are auto immune. I am not a doctor or nurse but that is what I was told. I keep you posted if I hear anything else.
