BREAKING

UPDATE ON ISLANDER HOSPITALIZED (ALLEGEDLY) WITH THE SARS COV-2 VIRUS CAUSING COVID-19

I was contacted late this afternoon by a person with information directly from a nurse caring for the person hospitalized with - allegedly - the virus causing COVID-19.

Of course there is no evidence the person has the virus, and we know that because Dr. Morrison confirmed in an email to my brother that PEI is using a Cycle Threshold Value of 37.9 and we all now know that PCR tests using a CT above 33, according to Dr. Anthony Fauci with the CDC, are useless:

"What is now sort of evolving into a bit of a standard," Fauci said, is that "if you get a cycle threshold of 35 or more ... the chances of it being replication-confident are minuscule." He continued: "It's very frustrating for the patients as well as for the physicians," he continued, when "somebody comes in, and they repeat their PCR, and it's like [a] 37 cycle threshold, but you almost never can culture virus from a 37 threshold cycle."

So with PEI using 37.9 we shouldn't take the claim that we have a person with the COVID disease too seriously, especially given his compromised health.

I have not - obviously - been able to independently verify the accuracy of the information sent to me. I'm sharing the entire back and forth between this person and me on Facebook messenger nonetheless, because I can think of no motive for someone to have sent this other than that stated in the message: a desire to share truthful information of relevance the person obviously believes is of no interest to the mainstream media, and fears will not be made public otherwise.

In a nutshell, the information shared with me was as follows:

- * The person is a male in his 40's with HIV
- * He is doing well and on oxygen

I have not - obviously - been able to independently verify the accuracy of the information sent to me, but I can think of no motive for someone to have sent this other than that stated in the message: a desire to share truthful information of relevance the person obviously believes is of no interest to the mainstream media, and fears will not be made public otherwise.

[Note: I had previously shared with this post an attachment of the actual messenger conversation but decided it was not necessary and sharing the information in point form would be sufficient.

In a nutshell, the information shared with me was as follows:

- * The person is a male in his 40's with HIV
- * He is doing well and on oxygen
- * Nurses wear masks, but apparently not N95

It is really important to know that this person has HIV for obvious reasons. (1) if he dies, it is likely the cause will be the underlying condition, and there is a mounting body of evidence that such fatalities testing (allegedly) positive with a PCR test were coded on the death certificate as a COVID death, God willing this person recovers, but if he was to die, this is critically-important information to avoid unnecessary panic which would likely be used to impose even more harsh and insane measures; and (2) if this person with a likely compromised immune system and serious medical disease recovers after contracting the virus, then none of us have anything to worry about and can get back to enjoying and making the most of life rather than fearing and trying to cheat death.

PS You're going to die someday
